In the last two feature articles, we explored evidence of a global flood in the form of Noah's Ark, and in geological phenomena like erosion, stratification and rock formation. The focus of this article is on another very fascinating aspect of science that relates to the account of the great flood in Genesis chapters 6 – 9. Fossils are such an intriguing and crucial part of the creation / evolution debate that they warrant an entire article devoted to them.

The Formation of Fossils

A fossil can be formed either *by* an organism or *from* an organism. There are fossils of organisms, and there are fossilized dung, tracks, or other impressions made by organisms. To begin, we must understand what it takes to form a fossil. First, as is evident from what we see in the world around us, it is more likely that a dead organism just decomposes

or is eaten by scavengers than it is to be turned into rock. However, occasionally

the environmental conditions are just right to transform dead organisms into fossils. Fossils can be formed from organisms that are microscopic in size to something as large as a dinosaur or a tree. Additionally, there are a few different ways an organism can be preserved in

rock like form. Two of the more commonly known types of fossilization are known as permineralization and petrification.

In the permineralization process, the areas of void in the organic material in the structure of the organism are filled in with minerals. Petrification occurs when the actual organic material of the organism is replaced by minerals such as silica and calcite. In other words, permineralization is a "fill in" process, and petrification is a "replacement" process when it comes to where the fossilizing minerals settle in the structure of the dead organism.

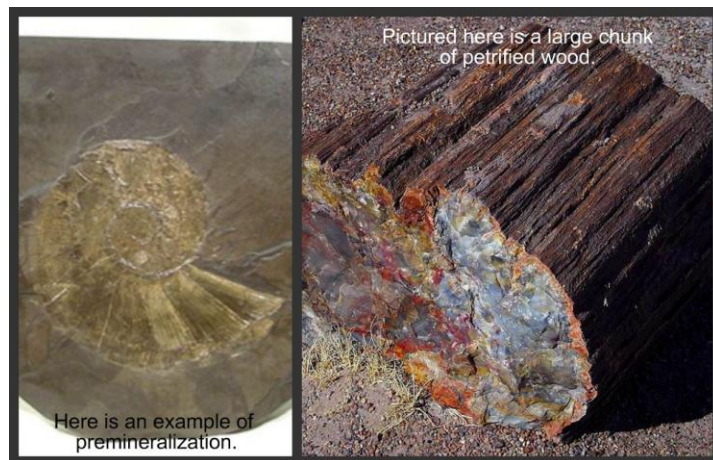

Fast Formed Fossils

Evolutionists have said that it takes millions of years for a fossil to be formed, but we know that fossils can in fact be formed very quickly under certain circumstances. Observations have been made of organic materials being

transformed into fossils in only a matter of a few years.¹ The conditions have to be just right in order for this to occur, but it

definitely has happened and does happen.

(article continued on page 2)

¹ <http://www.answersingenesis.org/articles/cfi/how-fast> and <http://www.answersingenesis.org/articles/cm/v24/n3/stone-bears>

PAGE 2

If we see this taking place in our time, who is to say that it didn't occur very rapidly during and shortly after the great flood?

Besides organisms and objects that we have seen turned to stone in a matter of years, there are also fossils that have been discovered that would seem to indicate beyond doubt that they were formed very rapidly. One of my favorite examples of these fascinating finds is the fossilized female Ichthyosaur² that appears to have been giving birth when it was covered by the suffocating muds that later turned it into a stone.³

Buddy Davis' kids song "Billions of Dead Things..."⁴ points out that there is so much evidence for a global flood in the fact that we find literally billions of dead things buried in layers of rock all around the world, just as we would expect if there really was a worldwide flood.

Polystrate Fossils

One presupposition of the evolutionary paradigm is uniformitarianism, which assumes that the processes involved in the physical realm occur at a constant rate. An example of this would be the way rock layers are said to have been formed. Most evolutionary thinking regarding geologic processes says that it took millions of years to form layers of rock in places like the Grand Canyon where we see layering that is hundreds or even thousands of feet thick. The presumption is that only a few very thin layers of sediment are deposited every year. However, there are multiple evidences that suggest that

multiple sedimentary layers can be deposited very quickly.⁵ One of these evidences relates to the subject of this article – fossils. If layers of rock take years to form, then why do we find fossils which transcend through multiple layers of rock in such places as the petrified forest of Yellowstone National Park?⁶

If it took millions of years to form those layers, wouldn't the trees have rotted away in the time it took to cover them completely? Would it not be more logical to believe that the layers were laid down rapidly in a large catastrophic flood, burying the animal or plant that became the fossil?

Marine Fossils on Mountains

Isn't it amazing that clams and other marine creatures are found preserved in

the rocks on the tallest mountains around the world?⁷ Perhaps in the past those creatures were more highly evolved and could climb mountains. Or maybe there was a global flood that killed billions of marine creatures and layered their fossilized remains in the strata that eventually was subducted and folded in the formation of those mountains in the later part of the flood, and shortly after its conclusion.⁸ Which option sounds more logical?

Fossilized Soft Tissue

Recently, this author read a news story about a fossil that had been found, which some scientists thought was a petrified dinosaur heart. This is a rather startling find because soft tissue (like skin, muscle and organs) generally decays so rapidly that discovering preserved tissue is

a very rare find. Since the time the discovery was announced, other scientists have said that the so-called fossil heart is in reality just a lump of sand and mud that had fossilized inside the dinosaur. One of the main reasons they say it is not a dinosaur heart is because this supposed dinosaur heart appears to be four chambered, while according to evolutionary theory, dinosaurs are supposed to be directly related to birds, whose hearts are three chambered rather than four. Time will tell whether or not this fossil really is a heart from a dinosaur. In the meanwhile, it is rather interesting that the scientists tend to write off anything that doesn't fit in with their preconceived notions, rather than investigating to discern if their assumptions are inhibiting them from conducting good science.

Another very fascinating fossil related discovery that occurred recently was the finding of some cellular tissue in a T-Rex bone that appears to be red blood cells.⁹ This discovery was made inadvertently by a secular evolutionist scientist at North Carolina State University. Of course, the evolutionists claim that this bone is nearly 70 million years old, and most of the scientists who heard about this discovery brushed it off as being bad research work, or perhaps as something that looked like blood cells but which was in reality something else. The presence of red blood cells and elastic tissue in a T-Rex bone seems to indicate that perhaps some dinosaurs lived fairly recently. Of course, rather than questioning their millions of years paradigm, the evolutionists seek to explain conundrums like this by positing that perhaps soft tissues of the sort found really can last for millions upon millions of years. "If particles of that one dinosaur were able to hang around for 65 million years, maybe the textbooks were wrong about fossilization."¹⁰

By Joel Kautt

“How Do We Know that Jesus is God?”

It's that time of year again – the holiday season is here, and Christmas is just around the corner. What better time than now to answer the question featured this issue?

Det-ermining whether or not Jesus is God is of crucial importance, because if He is not God, then millions of people throughout the past two thousand years have been disillusioned.¹¹ On the other hand, if Jesus really is God then, based upon His bold assertions,¹² the eternal destiny of countless people is at stake.

Many people will admit that Jesus really lived, and that he was a “good man” or perhaps even “a great prophet.” But, they will not accept that He was God in the flesh. However, it doesn't take much studying of the Bible for one to realize both that Jesus claimed to be God in human form, and that those around Him recognized that His claim held merit.¹³

There are several arguments from the Bible that demonstrate that Jesus was much more than a mere man. For one, He allowed other people to worship Him, which for a Jew was something strictly forbidden.¹⁴ Additionally, He claimed to be the “I am” which harkened back to the Old Testament appearing of God to Moses.¹⁵ Further, when Jesus was

on trial before the Sanhedrin, He was asked if He was the Son of God, to which He responded in the affirmative. This was a bold thing to do for a mere man, because making that claim would certainly bring capital punishment on such a person. However, those around Him recognized that He was more than just a man.¹⁶

The fact that Jesus fulfilled many very specific prophecies in ways that no human ever could do on their own is a very compelling argument for His deity.¹⁷

Additionally, the many miracles that Jesus performed confirmed His deity.¹⁸ Jesus cast out demons, healed the sick, diseased and malformed, and raised the dead, among many other miracles. Although some scoffers of His time attributed His power to demonic forces, many recognized that Jesus power came from God

Himself.¹⁹

Without a doubt, the most compelling confirmation of the deity of Jesus Christ was His resurrection three days after being tortured and crucified by the Romans. Hundreds of people saw Jesus after He had been killed on the cross.²⁰ What mere human can raise himself from the dead?

Jesus was fully man, yet fully God. In fact, Jesus was called “Immanuel,” which means “God with us.”²¹ Jesus is

the “anointed”²² One, who came as a Man - the “kinsman redeemer” - to save from eternal judgment all who accept Him in faith as their Savior.

The most important thing to remember this Christmas season is that Jesus Christ came to earth – fully God, and yet fully man and without sin – to redeem sinful humans like you and me from the just punishment for our sins against a holy and righteous Judge.²³ What will you do with Jesus this Christmas?

Joel Kautt is the Director of CET Ministries, and a regular writer, for The Tool Box.

Feedback:

“You guys are a blessing, thank you so much for spreading the word. May the Lord continue to richly bless your ministry.
- C.K., Kentucky”

“Thank you so much for what you are doing with your ministry. You are a blessing. Please share with me how I can learn more? I just want to be able to study with, pray for, and help support your ministry. I was truly moved. So was J. and we want in! What you are doing is so important to us!”

The Origins Debate in the News

Late last month a news story came to my attention when I read the headlines “80 Whales Buried Mysteriously in Chilean Desert”.¹ According to the different articles I read, a large amount of baleen whale fossils, along with the fossilized remains of some other large sea creatures, were discovered by a road construction crew last year in Chile, prompting a flurry of activity on the part of a team of paleontologists from around the world. Interestingly enough, the Atacama Desert, where the fossils were found, is the driest desert on the planet.²

The Atacama Desert is located adjacent to the planet’s largest ocean, but how did those whales get fossilized in a desert?³ It is highly unlikely that the whales climbed out of the water and trekked into the desert. But, maybe they were in the final stages of evolving into whales from other land dwelling animals, and just didn’t make it to the ocean in time before they died.⁴ Okay, so those last two sentences were absurd to make a point, but perhaps at some time in the past the ocean was significantly larger, or maybe the tectonic plates in the region were subducted or folded, leaving the whales high and dry.

While we don’t know for sure how these large sea creatures died, we do know of an event in history that may very well have played a part in the demise of these whales – the catastrophic global flood described in Genesis 6 – 9. Friends, let us remember what Peter said:

“...scoffers will come in the last days, walking according to their own lusts, and saying, ‘Where is the promise of His coming? For since the fathers fell asleep, all things continue as they were from the beginning of creation.’ For this they willfully forget: that by the word of God the heavens were of old, and the earth standing out of water and in the water, by which the world that then existed perished, being flooded with water. But the heavens and the earth which are now preserved by the same word, are reserved for fire until the day of judgment and perdition of ungodly men.”

(2 Peter 3:3 – 7)

¹ <http://creation.com/chile-desert-whale-fossils>

² http://en.wikipedia.org/wiki/Atacama_Desert#Aridity

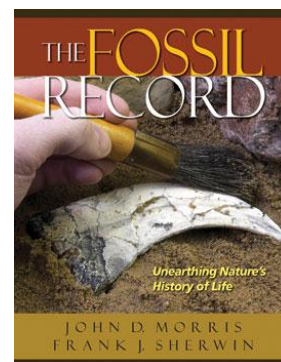

³ Interestingly enough, in researching for this column, I read about fossilized whales found in other deserts around the world.

⁴ Evolutionists believe that whales evolved from land dwelling creatures, and that they share a common ancestry with cows and hippopotami. See:

Resource Spotlight

The Fossil Record: Unearthing Nature's History of Life, by Dr. John D. Morris & Frank J. Sherwin.

In this book filled with great charts, pictures, and photographs, the authors examine in detail perhaps one of the oldest battle fronts in the war for the truth on origins – the battle over the interpretation of fossils. What better combination of authors to address the topic of fossils than a Ph.D. Geologist and a degreed Zoologist? The authors begin by discussing the battle of the worldviews of evolution and creation, and how each differs from the other. Much of the meat of the book covers the fossil record and what it tells us, and what it doesn’t tell us. Notable fossils are discussed in detail to show the evolutionary explanation contrasted with the creation-based view. Then, the authors examine “living fossils” which indicate that evolution is a faulty concept. Finally, the conclusion of the book answers the pertinent question “what difference does it make to me?” *The Fossil Record* is the book to read if you want to know the real explanation for the “billions of dead things buried in rock layers” that we find all over the earth.

To order a copy of this excellent book, please visit our website www.creationevangelismtools.org, click on the “resources” button at the top, and then click on the “Science” link.

Many times we think of Jesus Christ as only being present in the Bible in Matthew, Mark, Luke and John. In these gospels, it tells the account of His birth, the miracles He performed, and His crucifixion, burial and resurrection. Yet, we often fail to remember that our Savior, who is also the Creator, is foreshadowed numerous times throughout the Old Testament.

Not surprisingly, the first prophecy about Jesus Christ is found within the first three chapters of the Bible. As we know from reading the first two chapters of Genesis, God created this universe in six literal days, and called it all “very good”. But then, the Serpent deceived Adam & Eve into disobeying God, and partaking of the tree of the knowledge of good and evil. After this incident, God cursed Adam, Eve and the Serpent. The curse God gives the serpent is very interesting:

“And I will put enmity between you and the woman, and between your seed and her Seed; He shall bruise your head, and you shall bruise His heel.” (Genesis 3:15 - NKJV)

Notice that the editors of the New King James Version added the capital ‘S’ to the word ‘seed’. Why? Because they realized that this curse laid on the Serpent was really a prophecy of the Coming One, the Lord Jesus Christ. And, not just a prophecy of His coming to this earth, but ultimately, of His death (the bruising of the Seed’s heel), and His triumphant resurrection (the crushing of the Serpent’s head).

Perhaps one of the most well-known prophecies about Jesus Christ is the one found in Isaiah chapter nine:

“For unto us a Child is born, unto us a Son is given; and the government will be upon His shoulder. And His name will be called Wonderful, Counselor, Mighty God, Everlasting Father, Prince of Peace.” (Isaiah 9:6 - NKJV)

This passage, which we often use during the

Christmas season, foretells not only the gender of the Coming One: “a Son is given,” but it also tells us of the majestic names He would be called, and that His kingdom would be an everlasting Kingdom.

Yet, even more astonishing than those two passages, is the stunning detail given in Psalm twenty-two.

“For dogs have surrounded Me; the congregation of the wicked has enclosed Me. They pierced My hands and My feet; they divide My garments among them, and for My clothing they cast lots.” (Psalm 22:16,18 – NKJV)

The Messianic Prophecies in the Bible are specific and detailed.

David, the writer of this psalm, lived during the 900s B.C., which would put the date of this psalm more than 900 years before Jesus Christ even walked on the face of this earth. Another thing to consider is that crucifixion wasn’t even a form of execution at that time in history¹, and yet David, through the wisdom and inspiration given to him from the Holy Spirit, very accurately described the manner in which Jesus would die.

These are just three out of the myriad of Scripture passages which foreshadow the coming of our Savior Jesus Christ, and the details of His life and death. I’ll mention several more, which you can look up and read on your own: Psalm 16:10, 34:20, 41:9, 69:21; Isaiah 7:14, 40:3-5, 50:6, 53:7-11; Ezekiel 34:23-24; Hosea 11:1.

The numerous Messianic prophecies found throughout the Bible are another indicator of the authenticity, reliability and truth of the Holy Bible, the very Word of our Lord. Let’s remember this Christmas season, that the Triune God who created this universe, is also the One who sent His Seed, Jesus Christ, to be our Redeemer and Savior².

Phoebe Kautt is the editor and an occasional writer for The Tool Box.

Bird Bones & Bridges

For as long as humans have been in existence, the problem of being able to safely cross rivers, streams, ravines, and other such dangerous obstacles to paths of mobility, has been overcome through the devising of various types of bridges.

The complexity of these bridges differs greatly, based upon the resources and technology available to the local people groups. Materials used in constructing such bridges range anywhere from hemp twine spun into ropes, to bamboo, to concrete, and steel.

One of the more recent inventions in the realm of bridges is that of the steel truss bridge, whose use has been used mainly in railway applications. This style of bridge may be somewhat boring to some people, especially those who make use of them routinely. But there are several secrets to this particular bridge design that many people have never

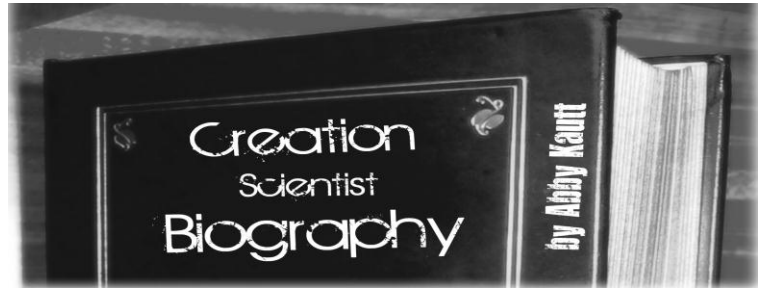

heard about, and that I trust you will find fascinating.

On the bridge in Figure 1, no weight is being applied, so the bridge remains stable. Without bracing, however, when a load is applied to the bridge, it begins to sag, and potentially break (Figure 2.). On a bridge using trusses (whether steel or wood –

Figure 3.), the downward pressure applied by the load is countered by the trusses, equally distributing the weight, and making the bridge much more stable.

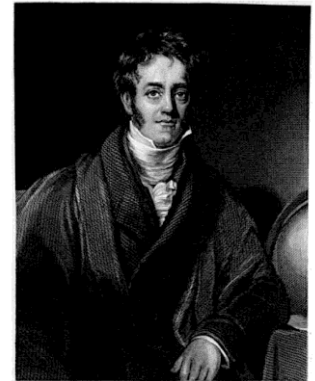

(article continued on page 7)

Sir John Herschel

John Fredrick William Herschel was born in 1792, to his parents William Herschel, a famous astronomer who had discovered the planet Uranus, and his mother Mary. His father's work inspired in his son an interest in the same scientific field.¹

Early in life however, school was not something that came easily for John. He was raised in Observatory House, which held a 40 foot telescope. John's aunt, Caroline Herschel was his main tutor until he began attending a school in Hitcham. At the tender age of eight, John was sent off to Eton College, but suffered bullying and harsh treatment at the hands of fellow students. His time at Eton only lasted a few months. Continuing his educational pursuits at home under the tutelage of a Mr. Rogers, a mathematics instructor, who was preparing him for University. He was accepted into St. John's, Cambridge in 1809.²

John Herschel
SIR JOHN FREDERICK WILLIAM HERSCHEL, BART F.R.S.

In 1812, he, along with friends Peacock and Babbage, created the Analytical Society, which the three used as a platform to encourage the introduction of the Continental methods of mathematical analysis, especially used in the universities. This dynamic trio were responsible for the translation of Lacroix's work *Traité du calcul différentiel et du calcul intégral* which differed in its approach to calculus from that of Newton. The society these three created didn't last long however. Not long after this, Herschel graduated from Cambridge at top of his class.³

1813 was a momentous year for John, not only did he graduate from university, but he was also elected a fellow of St. John's, and of the Royal Society. These appointments came in response to a paper he wrote on mathematics, "*On a remarkable application of Cotes's theorem.*" He plowed ahead in this field of study, publishing a two volume book on higher mathematics in 1820.⁴

In the year 1816 it seems that Herschel finally began to set his mind on becoming an astronomer. His path had wandered a bit in the previous two years, with him going to London to pursue training in the legal profession, despite his father's desire that John become a "man of the cloth." He wrote his friend Babbage: "... I am going under my father's directions,

(article continued on page 7)

³ Ibid.

⁴ Ibid.

The way in which these bridges are designed allows for maximum strength, with minimal weight and materials. The downward pressure being applied by the load on the bridge base is countered by the upper trusses.

Striking similarities between this bridge design and the internal structure of bird bones are immediately evident upon examination.

Image Credit:
http://platospond.com/WatsonsBlog/wp-content/uploads/2009/02/image_sci_animal0291.jpg

According to evolutionary theory, birds (avian creatures) are said to have evolved from reptiles several million years ago. However, this theory is called into serious question due to several problems, the first being the fact that reptilian bone structure is more dense, while avian bone structure is entirely different, being more like an outside case supported by trusses and cross-members on the inside. As with the design in truss bridges, the birds bone structure allows for maximum durability and minimum weight, so that energy efficiency in flight is greatly increased.

The amazing structures in both the truss bridge and in the bone structure are testimony to the astounding design and incredible complexity of intelligence used in both these structures, and remind us of how man, by finding a design in nature that really works, has copied his Creator!

Caleb Kautt is a writer, researcher and artist for Creation Evangelism Tools Ministries.

to take up the series of his observations where he has left them (for he has now pretty well given over regular observing) and continuing his scrutiny of the heavens with powerful telescopes ...”⁵

Thus the course was set. Despite studying a variety of other scientific topics during this time, Herschel’s aim was astronomy. Included in this time was his invaluable help in setting up the Astronomical Society, where he was promptly elected vice-president.⁶

In 1822, Herschel published his first paper on astronomy – a paper on a new way of calculating the eclipses of the moon. He wrote more papers, several of them noteworthy, and received much notoriety from fellow scientists, and the science community. Among these was a re-investigation of his father’s work on double stars: “The parallax is the apparent change in position of a relatively nearby star against the background of very distant stars due to the change in position of the earth in its orbit around the sun.”⁷

He traveled to South Africa in January 1834, where he observed Halley’s comet (1835) with his own 20 foot refractor telescope, which he brought along. Herschel made some discoveries concerning this comet, and its make-up, but was unable to write about his findings until over a decade later.⁸

After living a full and stressful life, one made more difficult by the many demands of his work but also by his travel and baronetcy, he retired to Collingwood, where he lived out the remainder of his life until his death in 1871.⁹ “In John Frederick William Herschel British science has sustained a loss greater than any which it has suffered since the death of Newton, and one not likely to be replaced...”¹⁰

The astronomical community of today is the richer for the work of Sir. John Herschel, and the tireless efforts he gave throughout his life and career to discovering what the Psalmist so beautifully calls “the glory of God.”

“The heavens declare the glory of God;
And the firmament shows His handiwork.”
Psalm 19:1

Evidences of a Global Flood, article continued from page 2:

Perhaps the most important thing we can learn and remember from our time spent studying fossils is that they serve as a silent reminder of how God judges sin. He sent a flood to destroy the earth because of man’s sin. In His mercy, He spared Noah and his family, along with enough animals and other creatures to repopulate the earth. Just as the creatures which we see as fossils are dead forever, we too will be eternally dead if we “miss the life boat” that comes through the gift of eternal life that Christ Jesus gives us.

Joel Kautt is the Director of Creation Evangelism Tools Ministries, as well as the author of numerous articles.

EVOLUTIONISTS IN THEIR OWN WORDS

Compiled by Phoebe Kautt

C.S. Lewis is perhaps most well-known for his writing of the Narnia Series.¹

“The Christian and the Materialist hold different beliefs about the universe. They can't both be right. The one who is wrong will act in a way which simply doesn't fit the real universe.”²

- **C.S. Lewis**, famous author and lecturer, and renowned Christian apologist.

Compiler's Note:

Have you ever thought of Evolutionists as that: Materialists? Well, that's what they are. They even call themselves that, or using a different term, Naturalists, which means the same thing. They believe that nature, the material things, is all there was, is and ever will be. This belief drives their actions, which, as C.S. Lewis said, “simply doesn't fit the real universe.”

Ministry Update

This year has been a busy year for us; right up to the end of the year. In November, our entire family had the wonderful opportunity to attend the National Missionary Convention in Atlanta, GA. This convention was attended by a few thousand people who are interested in Christian missions work. Our booth for CET Ministries enabled us to reach out to many of those attendees. The Lord blessed us with some great conversations with many people, and with some new connections both with people interested in our ministry, and with other missionaries who have interest in using creation evangelism techniques in their mission work in other countries. We were thankful to have this opportunity of outreach, and the learning experience that it brought to us. The New Year is just around the corner, and we look forward to what the Lord has in store for us in the months ahead. We have been praying about, and thinking about several new means by which we would like to reach out to people with the message of the truth of the Bible. We are excited about the many possibilities to serve our Creator by teaching His Word, and we pray that we will be a blessing and encouragement to many more people. Please pray that we would be faithful to follow the Lord wherever He may lead us.

One of the eye-catching props at our booth.

Mission Statement

We see the problem of evolutionary thinking as eating into the foundation of the Biblically correct worldview. We desire to strengthen the faith of other Christians in the reliability of Scripture, and equip them to have answers for skeptics and unbelievers. As our culture declines morally, Christians need to uphold the authority of the Bible in every aspect of the culture.

Our ultimate mission is to reach souls for Christ. We work to lay the Foundation (Genesis) for the Gospel.

Purpose Statement

Creation Evangelism Tools Ministries exists to:

Teach

God's word starting with Genesis 1:1

Equip

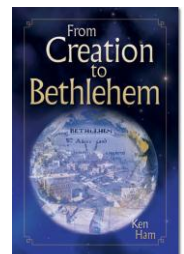

God's people to answer skeptics

Proclaim

Truth of Creation in times of deception
